EDUCATION

HKUST
BEng Computer Science
Minor: Actuarial Math
2023 – 2027
Beyond Academic Scholarship

LANGUAGES

- English
- Mandarin
- Hindi

TECHNICAL

Languages: C++ · Python · Java · JS

Tools: AWS · Azure · GitHub

Data: SQL · MongoDB · Power BI

ML/AI: TensorFlow · PyTorch · CV

Stack: React · Node · Supabase

AWARDS

- **Morgan Stanley Code to Give** 2nd Runner Up
- **HKSTP Techathon+ 2025** Merit + Ideation Grant
- **Cathay Pacific Hackathon** Semi-Finalist 2024

3+	$100K	6+	2025
Countries Reached	Grant Secured	Projects Shipped	BNP Paribas Intern

ABOUT ME

I'm a final-year Computer Science student at HKUST, minoring in Actuarial Mathematics, with a genuine obsession for building systems that are both technically rigorous and genuinely useful. I don't just write code — I solve problems that matter, whether that's reducing latency in live trading workflows, building a $1.2M assistive navigation ecosystem for the visually impaired, or shipping full-stack apps used across 3 countries. I thrive at the intersection of intelligent systems and real-world impact, and I bring both the engineering depth and the ownership mindset to execute end-to-end.

WHAT I DO

AI / ML
From LSTM forecasting and KNN/SVM classifiers to LLM-based RAG chatbots and multi-agent pipelines.

Quant & FinTech
Production-grade automation at BNP Paribas — reducing latency in options/futures trading, risk controls, and backtesting.

Full-Stack
End-to-end apps from React + Supabase mobile platforms to FastAPI data engines — shipped to iOS, Android, and web.

Assistive Tech
Lucida: a $300 AI navigation vest for the visually impaired, 40% faster than a white cane. $100K HKSTP-backed.

FEATURED PROJECTS

Lucida — Assistive AI Navigation
Python · TensorFlow · OpenCV · Flask · GPS

AI-powered smart vest for the visually impaired: 98.2% object detection accuracy across 200+ classes, <50ms audio latency, 40% faster navigation, at <10% market cost ($300 vs $5,300). $100K HKSTP-backed, 7 NGO partners, 25+ beta users.

StorageSync — Cross-Platform Inventory
TypeScript · React · Supabase · Capacitor · Stripe

Full-stack household/enterprise inventory app with recursive location trees, QR/barcode batch scanning, real-time sync, force-directed knowledge graph, and Stripe subscription tiers — live on iOS, Android & web.

Data Formulator — AI Analytics Platform
Node.js · Python · TypeScript · Power BI

Power BI alternative for Maxims Group saving HKD 900K in subscription costs. Integrated AI-generated tables, query-based visualisations, and a marketing chatbot with word-embedding-powered employee Q&A.

ContextSign — ASL Recognition
Python · MediaPipe · scikit-learn · NLTK · OpenCV

3-layer real-time ASL fingerspelling system: KNN/SVM over 89-dim hand landmarks, disambiguated by a trigram language model (Brown Corpus), with offline TTS accessibility output at ~30 fps.

WHERE I'M HEADED

I want to build systems that are both technically rigorous and genuinely useful — whether that's quantitative models that move markets, or assistive tools that open doors for underserved
